**OPPORTUNITY TO BUY DIRECT FROM:
"MR. GARY'S LISTINGS"
OF AFGHAN SUPPLIERS
WITH NO MIDDLEMEN OR WOMEN**

NEWSLETTER #3
May 1, 2021

Welcome,

This newsletter initiative is sponsored by USAID through the Afghanistan Competitiveness of Export- Oriented Businesses Activity (ACEBA) and implemented by Gem Hunters Corporation, whereby Afghans in the gemstone industry can present their products to the worldwide market. Buyers can contact Afghan sellers directly to negotiate pricing and arrange shipping and payment.

Disclaimer: This newsletter is for the purpose of providing information and contacts only. USAID, ACEBA, and Gem Hunters Corporation are not and will not be involved in any transactions. Transactions are completely and strictly up to buyers and sellers, including shipping and payment of goods, and payment of duties, taxes and fees to Afghan government agencies and those in the buyer's country (destination). Neither USAID nor Gem Hunters are responsible for the quality, grade or carat weight of stones etc. and independent arrangements must be made between buyers and sellers.

TABLE OF CONTENTS

1. Message from Mr. Gary
2. Sourcing of Afghanistan Gemstones
3. Announcement of Dubai B2B Conference
4. Documentary Film “The Gem Hunter in Afghanistan”
5. Photos of Panjshir Valley and the Emerald Mines
6. Article “The Emeralds of Panjshir Valley Afghanistan”
7. Emerald Mines of Afghanistan plotted on satellite map (2009)
8. New USGS Map of Panjshir Valley, Afghanistan
9. Photos of Jegdalek Ruby Mines
10. Article “Ruby and Sapphire From Jegdalek Afghanistan”
11. Ruby and Sapphire Mines plotted on satellite map (2009)
12. Photo of Papruk Tourmaline Mine
13. Photo of Soray Tourmaline, Kunzite, Aquamarine and Morganite mines
14. Photo of Sar-e-Sang Lapis Mine
15. Mister Gary’s Listing of Rough and Cut Gemstones, Jewelry and Lapis Products with contact information for buyers

Message from Gary Bowersox

Dear Reader:

For over seven thousand years the Afghanistan gemstone industry has expanded in the value and number of gemstones produced. Today a private gemstone industry continues to flourish even under the pressure of the government, the Taliban and Covid-19. One can find Afghanistan gemstones in all the world's major markets including North and South America, Europe, Asia, the Middle East and in the Gulf States.

The Gemstone industry in Afghanistan today is supported by private families, village people, village leaders, police and government officials. Thousands of people are involved and supporting themselves and their families with funds provided by the gemstone industry. The Afghanistan government, USAID and other organizations have started programs to advance the Gemstone Industry of Afghanistan. USAID with DAI is planning a B2B conference on July 12th-15th in Dubai for a few Afghanistan sellers and international buyers. For additional information on the proposed conference email MrGary77@aol.com.

Since our second newsletter on April 1, 2021, we have added educational information such as a film “The Gem Hunter in Afghanistan” taking the viewer on a trip to the emerald and lapis mines in Afghanistan. See many additional products to “Mr. Gary’s Listings” from new Afghan sellers.

The goal of this Newsletter is to assist in providing world gem industry buyers and other interested parties with an introduction through photos, products and contact information of Afghans who desire to sell their gem industry products. This is your opportunity to connect with Afghans on a personal basis and purchase their products.

If you have not signed up for our monthly newsletters, you can join our currently small community for FREE by signing up at <http://eepurl.com/b4FQI9>

Enjoy the Newsletter and have a nice day,

Gary W. Bowersox “The Gem Hunter”
PO Box 89646
Honolulu, HI 96830 USA
MrGary77@aol.com

SOURCING OF AFGHANISTAN GEMSTONES

Gemstones both rough and cut for this USAID project are sourced directly from the gemstone mines in Afghanistan. They are available through direct contact with the buyers as shown in this newsletter. The jewelry displayed has gemstones from Afghanistan set in Afghanistan.

Most of the miners involved in this project are third generation and I have worked with their families for over forty years. USAID has agreed to support these miners who are properly sourcing their gemstones. The current conflict around these miners puts their families and livelihoods in jeopardy. We address this through providing a safe and viable supply chain to the USA and other countries.

The government of Afghanistan is currently and rapidly working on regulations to legalize the gemstone industry of Afghanistan with proper documentation issued by the government for exports. Hopefully, this will be accomplished within the next few months.

The few cutters in Afghanistan have been taught safety in their trade. This is an important point of value addition and bringing much needed employment to the vulnerable peoples of Afghanistan.

ANNOUNCEMENT

USAID B2B Gemstone trade conference/sale
of Afghanistan rough gemstone to be held in
Dubai 12 – 15 July 2021

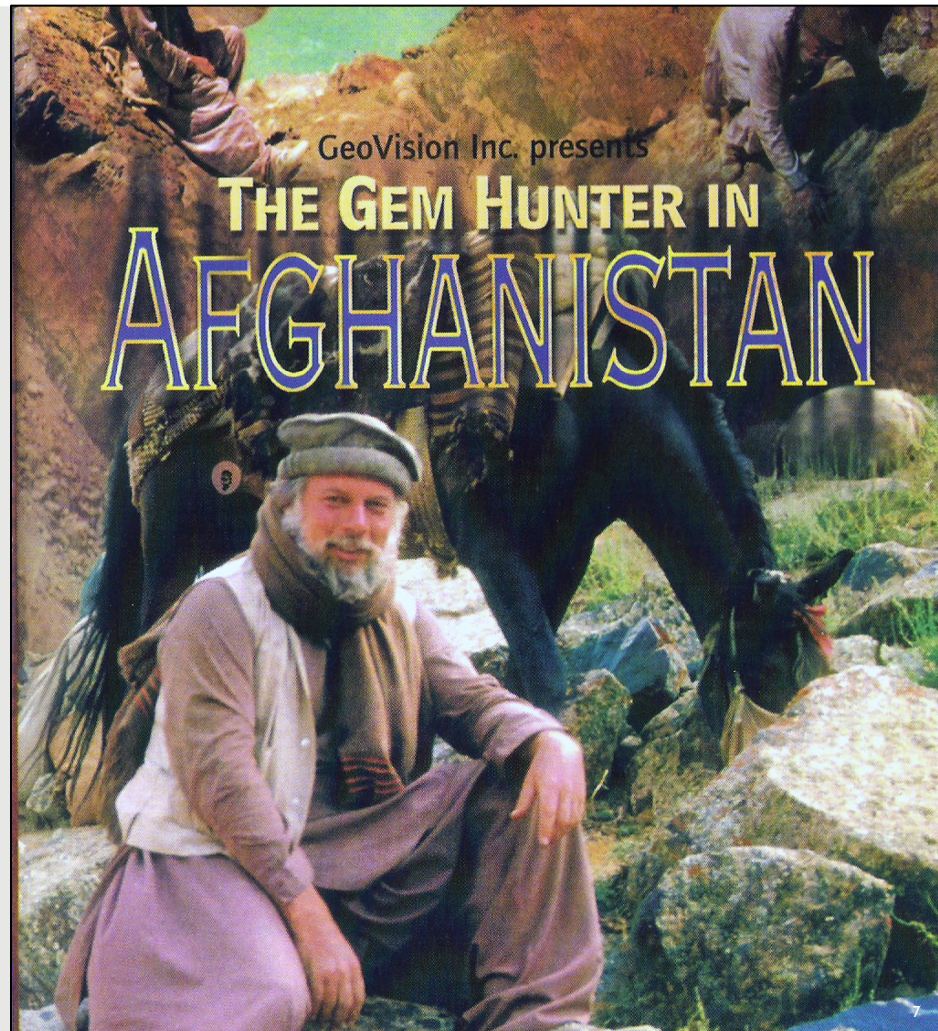

For Information Email:
MrGary77@aol.com

“The Gem Hunter in Afghanistan” (A 52-minute Film)

The Gem Hunter in Afghanistan is a great adventure to discover some of the most spectacular gem mines, people and scenic beauty on earth. Gary Bowersox travels into the Hindu Kush Mountains of Afghanistan to find the oldest mine on earth. Rich blue Lapis Lazuli, the precious gemstone that decorates the death mask of Tutankhamun, is still mined in the remote mountains. The journey there involves slipping over borders at night and climbing some of the highest passes on earth. Traveling by horseback, Gary follows in the footsteps of Alexander the Great and Marco Polo. In The nearby Panjshir valley Gary meets old friends and visits emerald mines. The vein of raw gemstones was uncovered by Russian bombs and is now one of the most important sources of emeralds in the world. (Copy right GeoVision, Inc.)

WORLD EMERALD UPDATE

The Emerald Mines of the Panjshir Valley, Afghanistan

By Gary Bowersox

In the first century A.D., Pliny, writing in the *Natural History*, referred to the occurrence of "smaragdus", a Latin term referring to emerald and other green stones in the vicinity of Bactria, the geographic area including present-day Afghanistan. In fact, the presence of "smaragdus" has reportedly come from this region for thousands of years. Afghanistan's Panjshir Valley, an hour drive north of the capital city Kabul, now has commercial emerald production. Such known production only commenced in the early 1980s and has primarily been conducted by Afghan enterprises and individuals much of which is based on historic customary, tribal and family-based operations.

Large, dark green crystals have been discovered by local Afghans in hundreds of tunnels and shafts throughout the valley. Informal removal and sale of these emeralds served to financially support the activities of the Mujahideen ("freedom fighters") during the Soviet occupation of Afghanistan (1979-89). Since that time the emeralds mined have continued to provide an informal, if not lucrative, business opportunity for local Afghans. Emerald mining in Afghanistan has never been formalized; no legal licensing of emerald mines is known to be in place. Nonetheless, emerald production conducted by local Afghans generates an estimated \$10 million each year; revenues generated are not formally taxed.

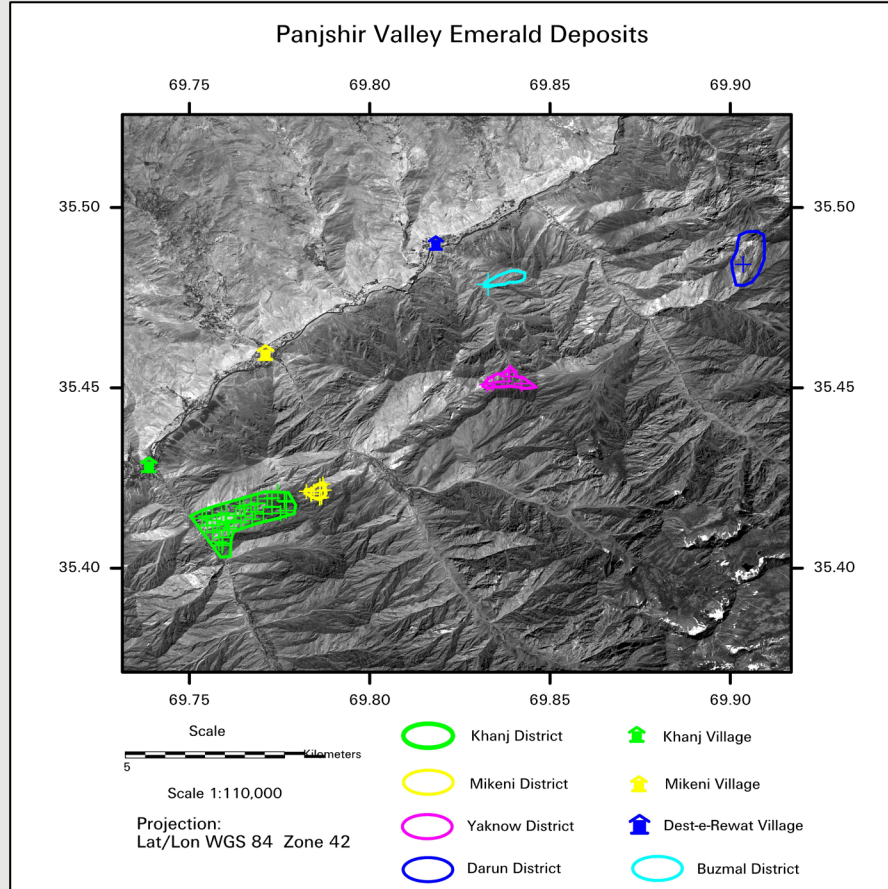

This map shows the location of the Panjshir Valley in Afghanistan and the area that encompasses the emerald deposits identified in this article. Courtesy of Gary Bowersox and the greater assistance of Bob and Cora Silver.

Fig 1: The Darun emerald mining area is located in the back of the mountain range shown in this photo taken from the Panjshir Valley road. The Darun emerald mines are the farthest north of all known emerald mines in Panjshir Valley. (Photo by Gary W. Bowersox)

Ruby Mines Jegdalek, Afghanistan

<http://www.thegemhunters.com/pdf/articles/Ruby%20and%20Sapphire%20from%20Jegdalek,%20Afghanistan.pdf>

RUBY AND SAPPHIRE FROM JEGDALEK, AFGHANISTAN

By Gary W. Bowersox, Eugene E. Foord, Brendan M. Laurs,
James E. Slagle, and Christopher P. Smith

This study provides detailed mining and gemological information on the Jegdalek deposit, an east-central Afghanistan, which is hosted by elongate beds of corundum-bearing marble. Some lace-grade ruby has been recovered, but most of the material consists of semitransparent pink sapphire of cabochon or carving quality. The most common mineral features are dense inclusions of holed and nonholed fracture planes and lamellar twin planes. Color zoning is common, and calcite, apatite, zircon, mica, iron sulfide minerals, graphite, rutile, aluminum hydroxide, and other minerals are also present in some samples. Although the reserves appear to be large, future potential will depend on the establishment of a stable government and the introduction of modern mining and exploitation techniques.

ABOUT THE AUTHORS

Mr. Bowersox (MGary77@aol.com) is president of GeoVision, Inc., Herkules, Nevada, and has been active in Afghanistan since 1972. Dr. Foord (aceward) was a resource geologist-mineralogist with the U.S. Geological Survey, Denver, Colorado. Mr. Laurs is senior editor of Gems & Gemology, and Dr. Slagle is director of GIA Research, at GIA in Carlsbad, California. Mr. Smith (csp@gemmy.com) is graduate of the Gemmology Lab, Lucerne, Switzerland.

Please see acknowledgments at the end of the article.
Gems & Gemology, Vol. 36, No. 2, pp. 110–126
© 2000 Gemological Institute of America

The gem mines of Afghanistan are some of the oldest in the world. The large lamuli mines at Sar-e-Sang, in the Badakhshan region, have been worked for at least 6,500 years (see, e.g., Wyatt et al., 1981). Today, Afghanistan continues to be an important source of various gem minerals—including emerald, ruby, sapphire, aquamarine, tourmaline, and spodumene (see, e.g., Bowersox and Chamberlain, 1995). Yet relatively little is known about many of the gem localities.

This article reports on the only known source of ruby in Afghanistan: the Jegdalek region. A historical review, the geology, mining methods, and current production of gem corundum (figure 1) from Jegdalek are given below, together with the results of our research on the gemological properties of this material.

BACKGROUND

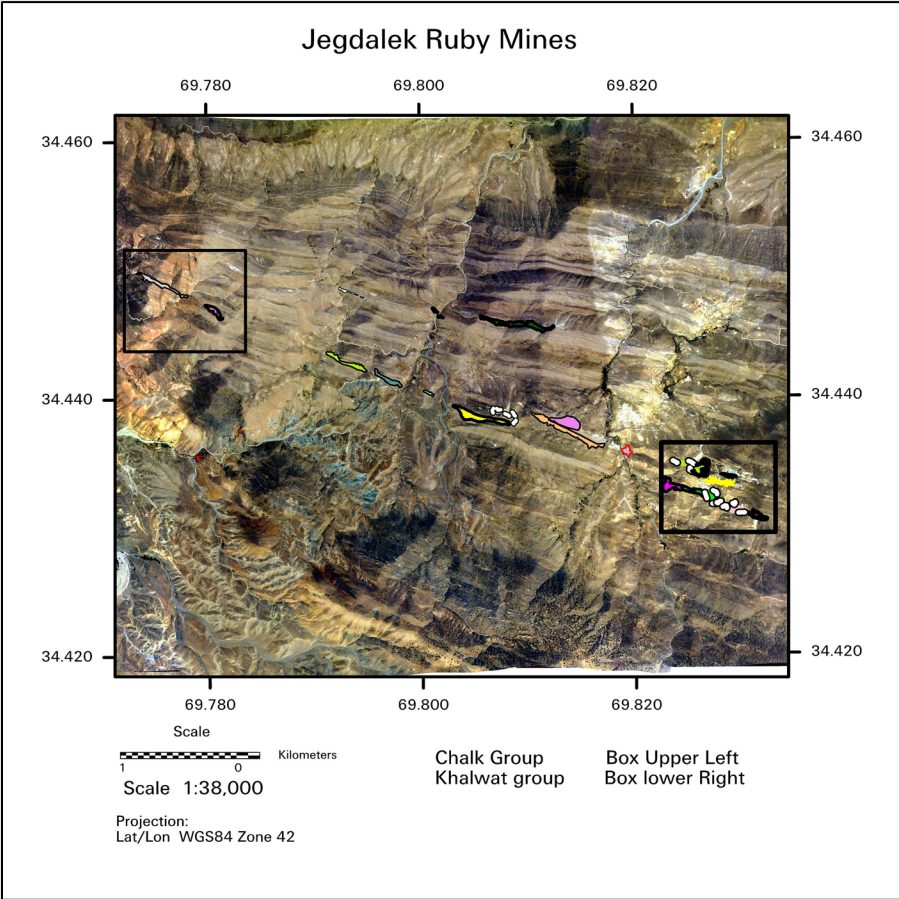

Although most of the records of the Ministry of Mines and Industry have been destroyed by the rocket attacks and bombs that have plagued Kabul since 1979, we were able to glean a fair amount of information from the literature. The geographic location of Afghanistan among several powerful neighbors (i.e., China, Iran, Pakistan, Uzbekistan, Tajikistan, and Turkmenistan, figure 2) has resulted in a long history of turmoil. Additionally, invasions by the Greeks (327 BC), Mongols (1227), British (1838–1919), and Russians (1979–1988), among others, destroyed and/or displaced portions of the Afghan population. However, these major invasions also influenced gem exploration and production, as gems were sought to trade for weapons. In addition, throughout history, Afghan mining areas have been the objects of tribal wars and banditry (see, e.g., Wood, 1841). In 1992, the senior author experienced nightly rocket attacks when he visited the ruby mining area.

The Jegdalek mines have been worked for more than 700 years. During the 1300s, wealthy Muhammadan merchants sold rubies to Kublai Khan and other famous historical fig-

The Prestige Gemstone Report™

Document No: 1088288 Validation Date: 15 November 2017

Identification
Mineral Type: Natural Beryl
Variety: Emerald
Color Description: Green

Carat Weight: 7.07 cts Shape: Cushion
Measurements: 14.80 x 10.11 x 7.50 mm Cutting Style: Modified Uniflat Cut

Comments:

Origin
Provenance: Afghanistan

Comments: Based on available geological information, it is the opinion of the Laboratory that the origin of this material would be classified as Afghanistan.

Enhancement
Standard: Clarity Additional: None
Degree: Minor
Type: Traditional
Stability Index: Very Good to Good

Comments: Emeralds are commonly clarity enhanced to reduce the visibility of features. Traditional methods used to clarify emerald gemstones include aqueous oils (such as Cedarwood oil) and waxes (paraffin), as well as others.

Identification

American Gemological Laboratories™
 America's first and most highly respected origin lab.

Founded in 1977,
 AGI is an internationally recognized gemstone testing facility, specializing in comprehensive colored stone analyses.

AGI has the distinction of being the first laboratory in the United States to issue Country-of-Origin reports. Our company and its progenies have a long tradition of research into the detection of and reporting on gem identification- and classification, gemstone treatments and provenance determinations.

Our staff is composed of experts in the field of gemstone testing and reporting. Our findings reflect the latest knowledge and analytical techniques to ensure the highest standards are applied on every stone we test.

AGI's testing and reporting methodology provide you with unsurpassed quality and reliability. We are committed to providing the highest level of service and reporting that our clients and the industry have come to expect from the AGI.
